

Symptom - presents - Disease

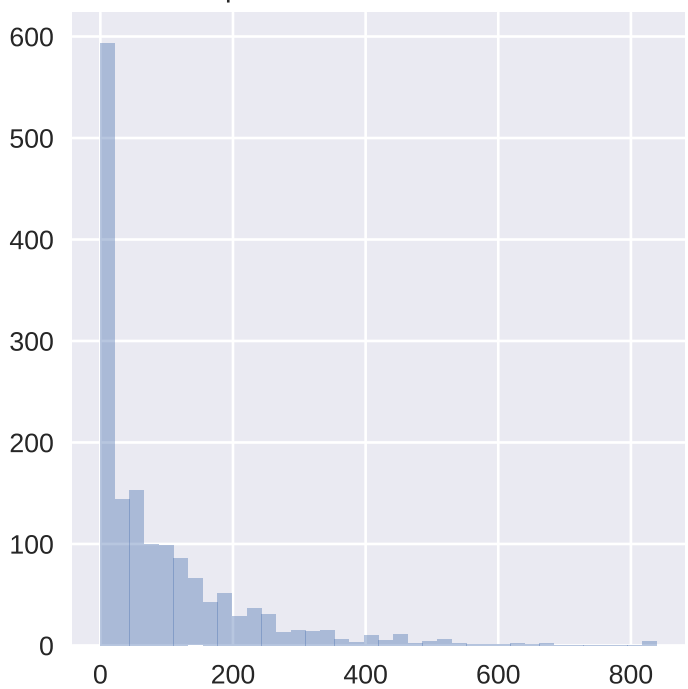

Pharmacologic Class - includes - Compound

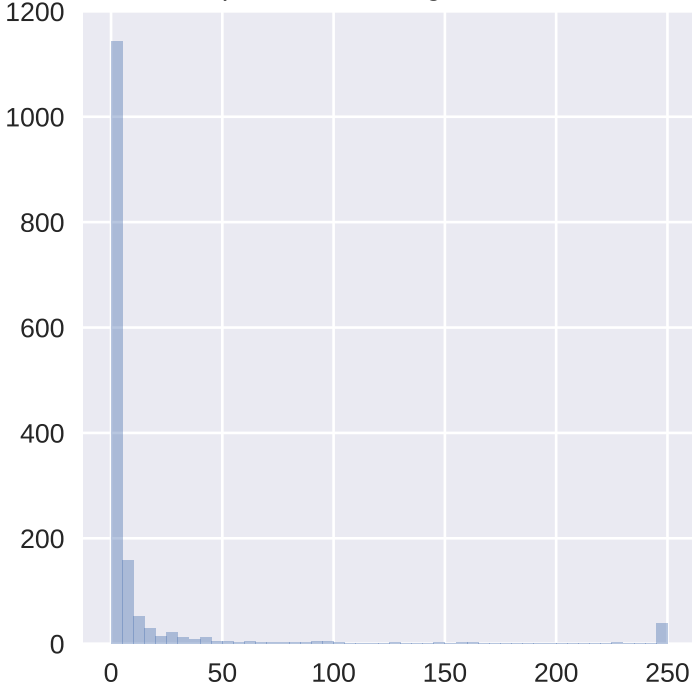

Compound - binds - Gene

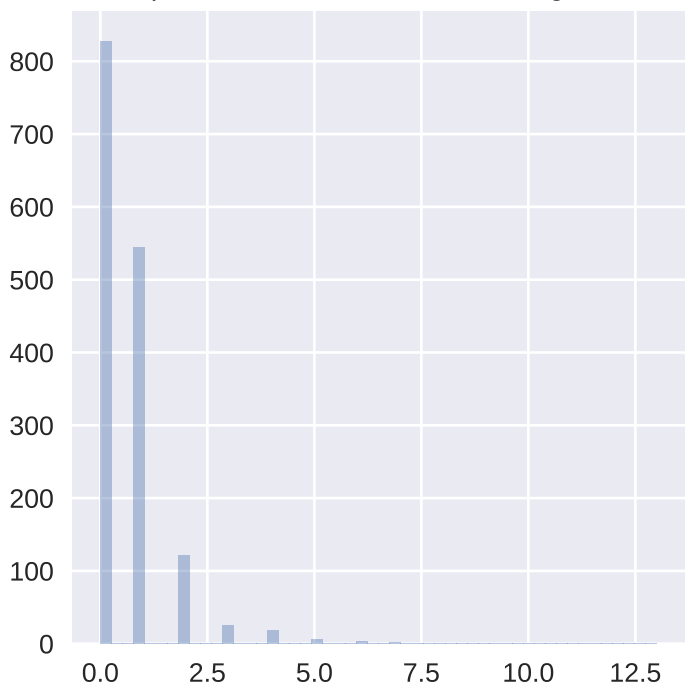

Compound - causes - Side Effect

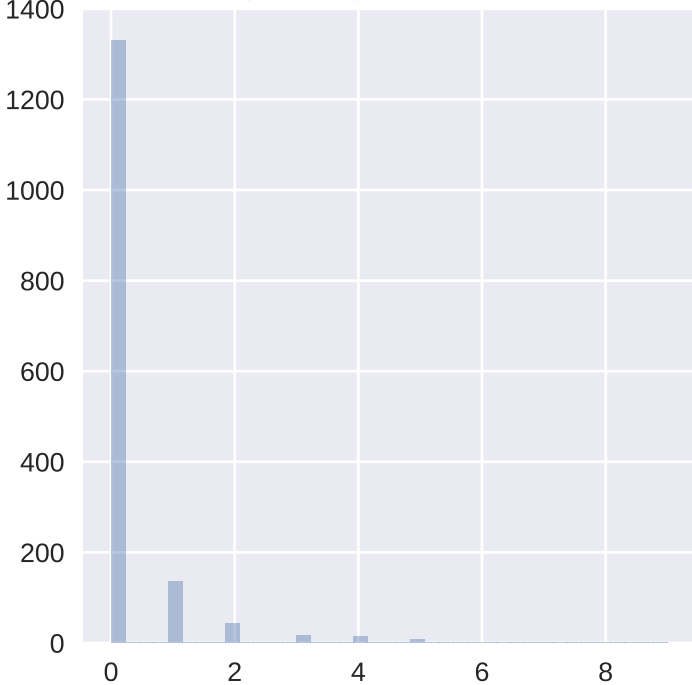

Compound - downregulates - Gene

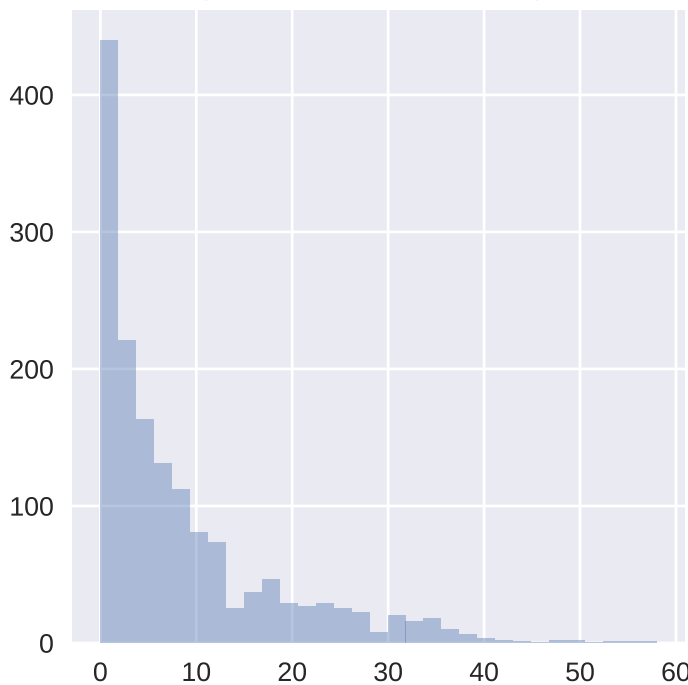

Compound - includes - Pharmacologic Class

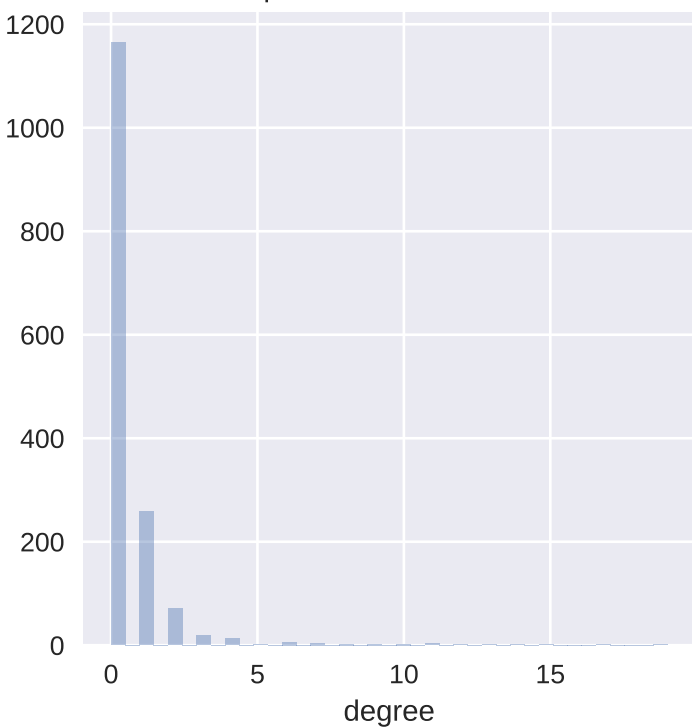

Compound - palliates - Disease

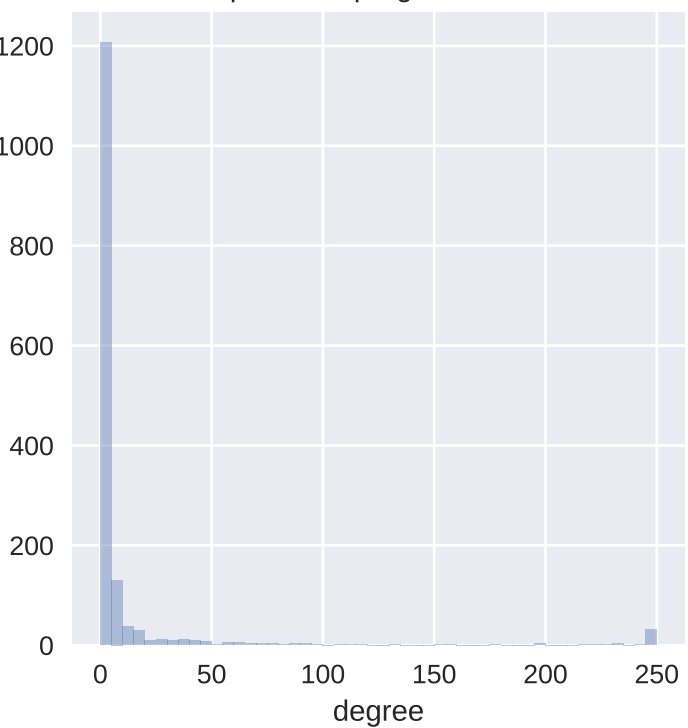

Compound - resembles - Compound

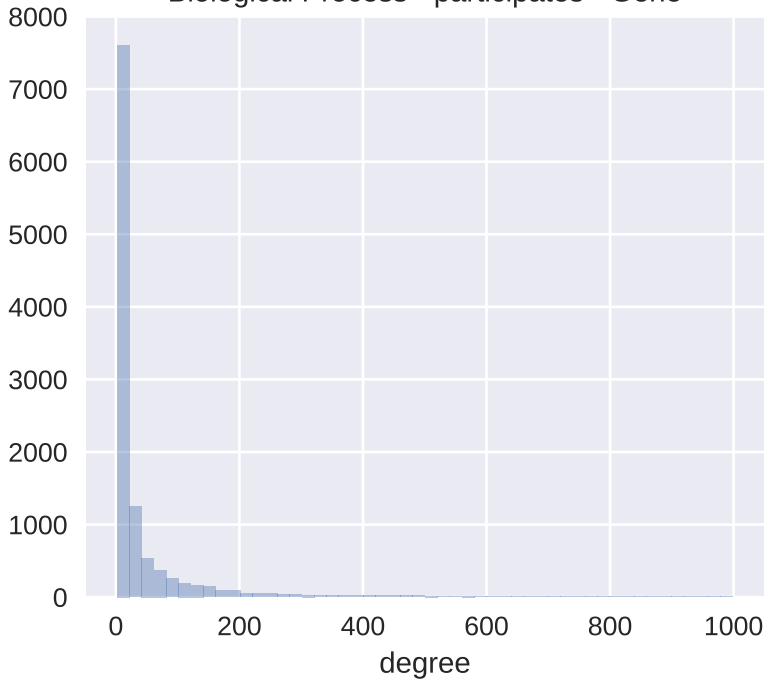

Compound - treats - Disease

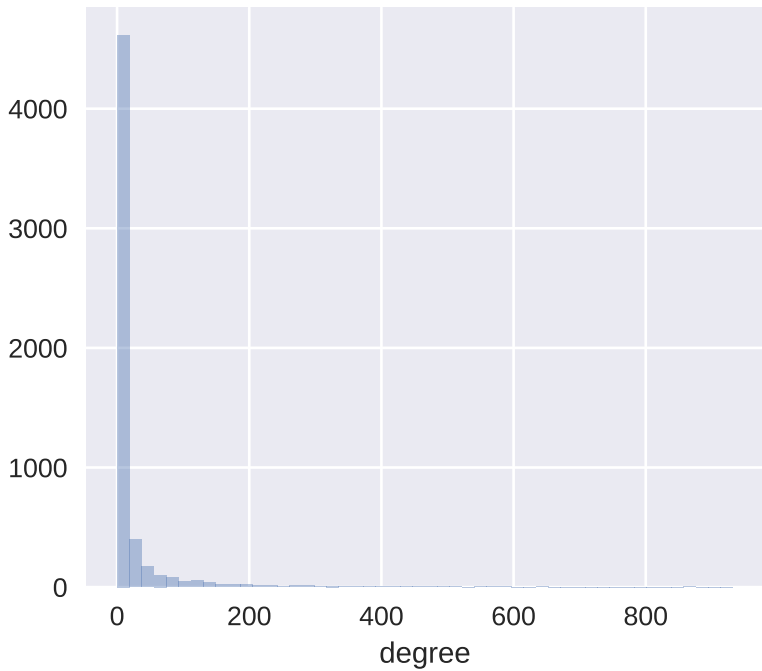

Compound - upregulates - Gene

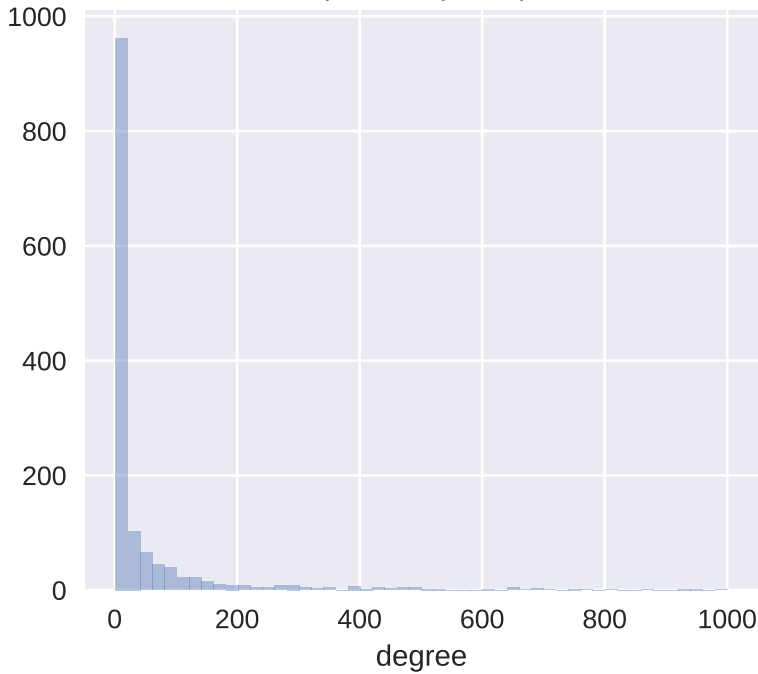

Biological Process - participates - Gene

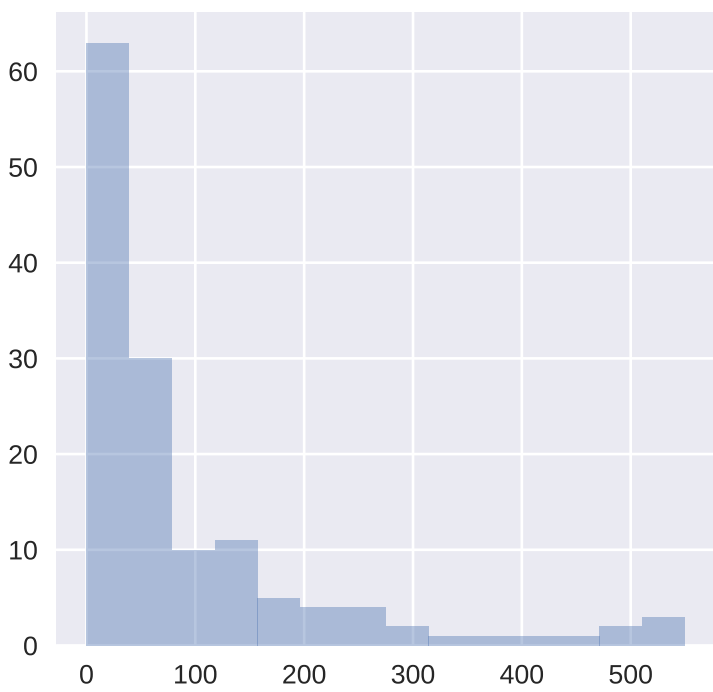

Side Effect - causes - Compound

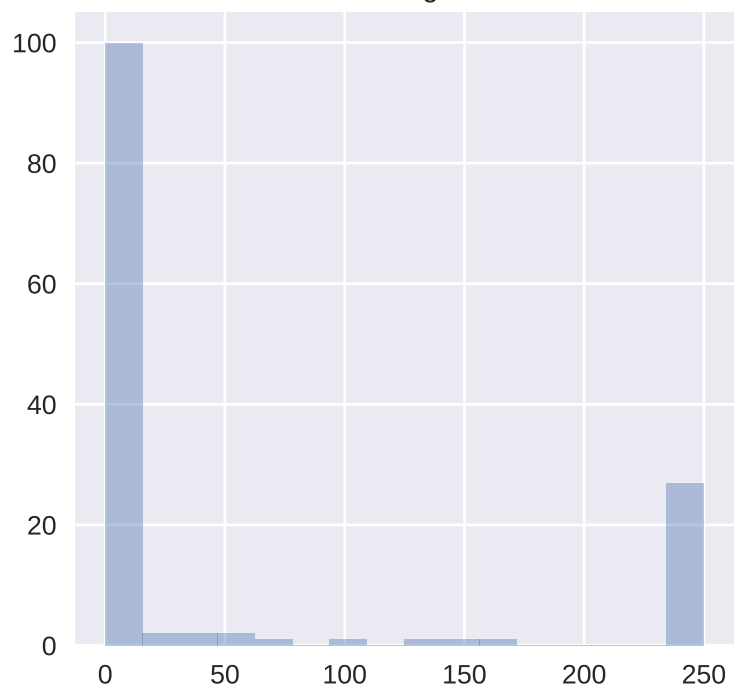

Cellular Component - participates - Gene

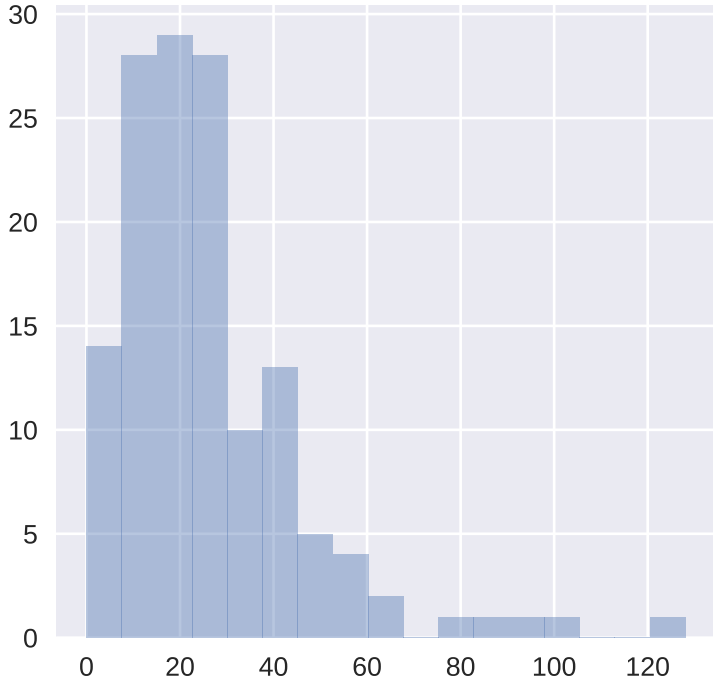

Disease - associates - Gene

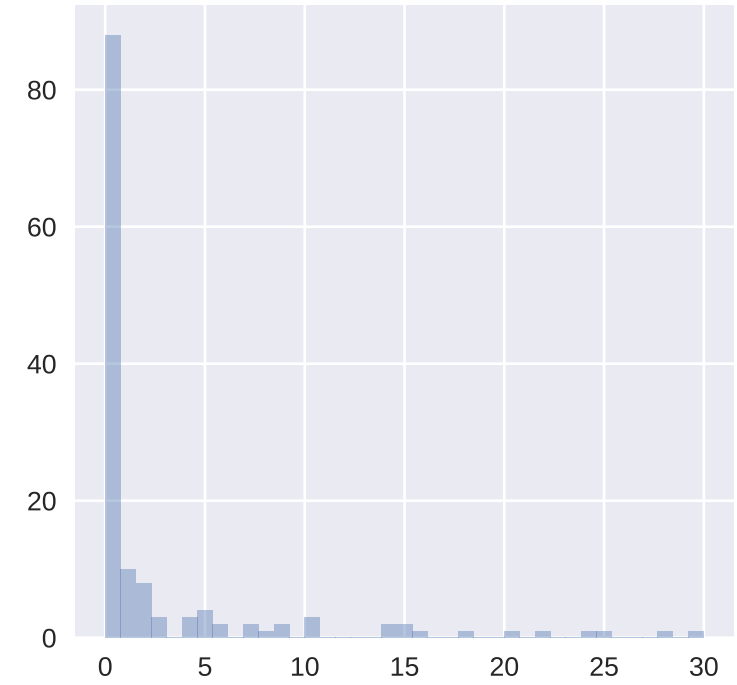

Disease - downregulates - Gene

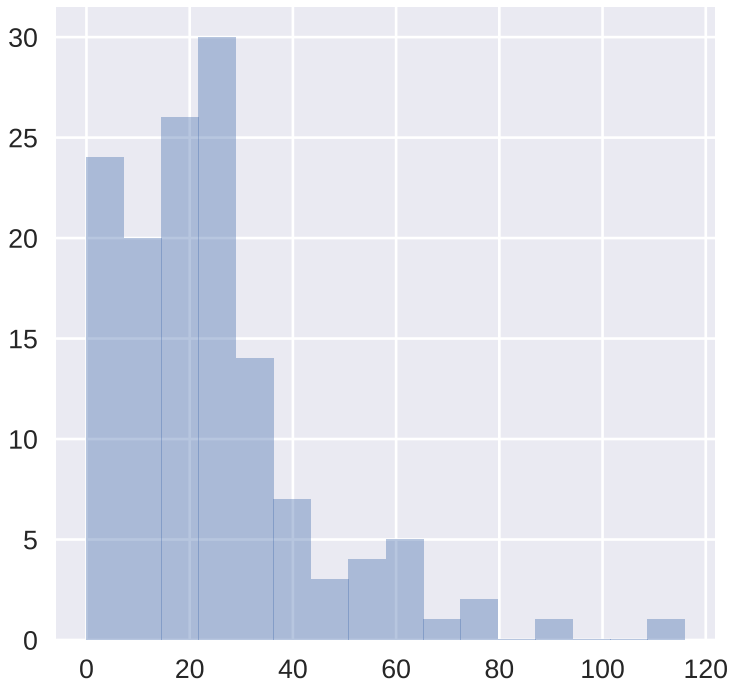

Disease - localizes - Anatomy

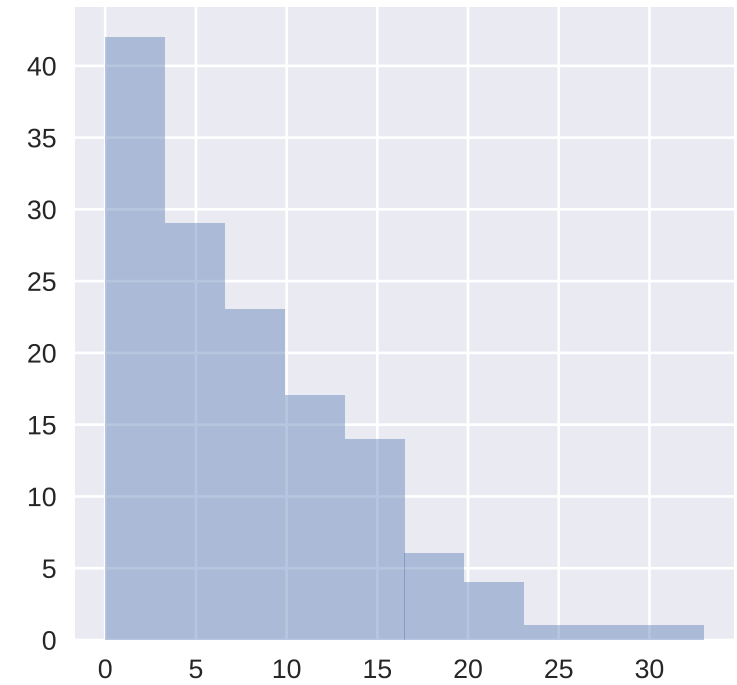

Disease - palliates - Compound

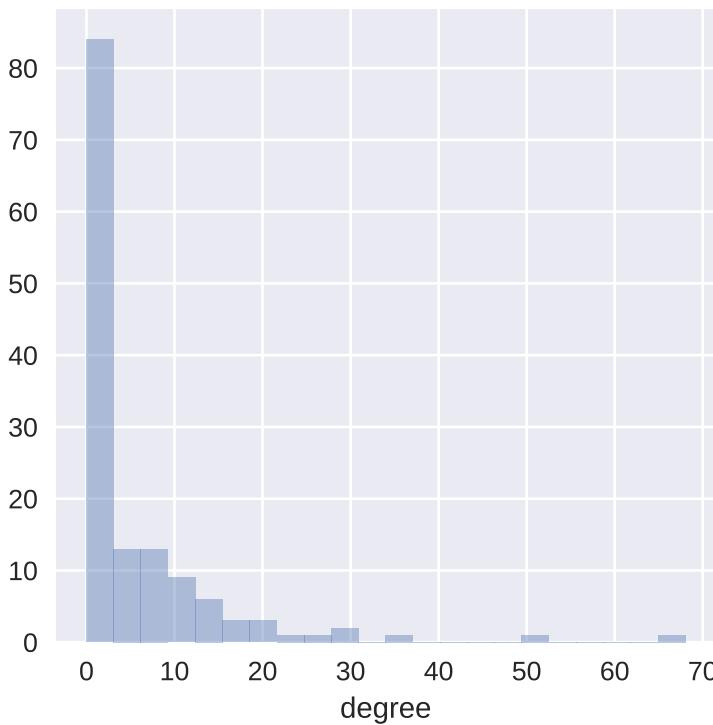

Disease - presents - Symptom

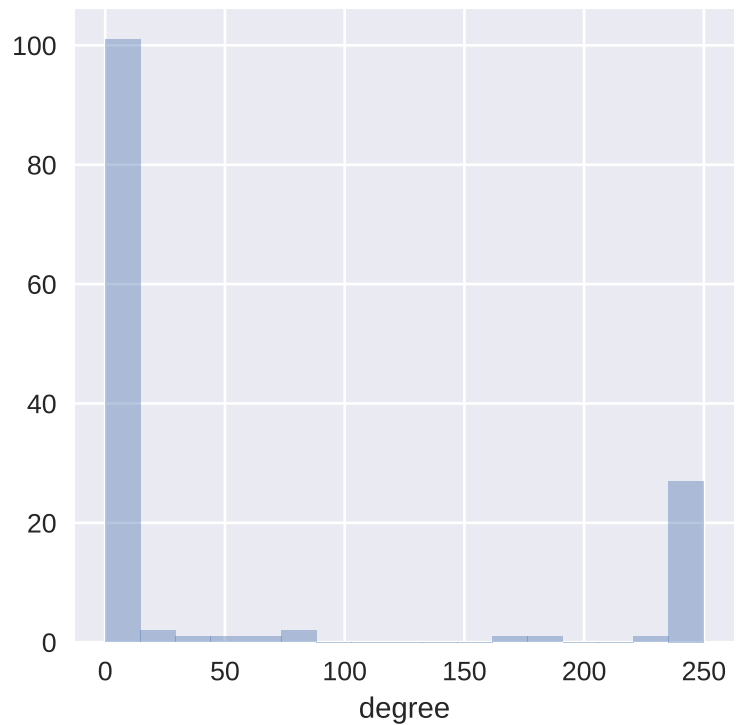

Disease - resembles - Disease

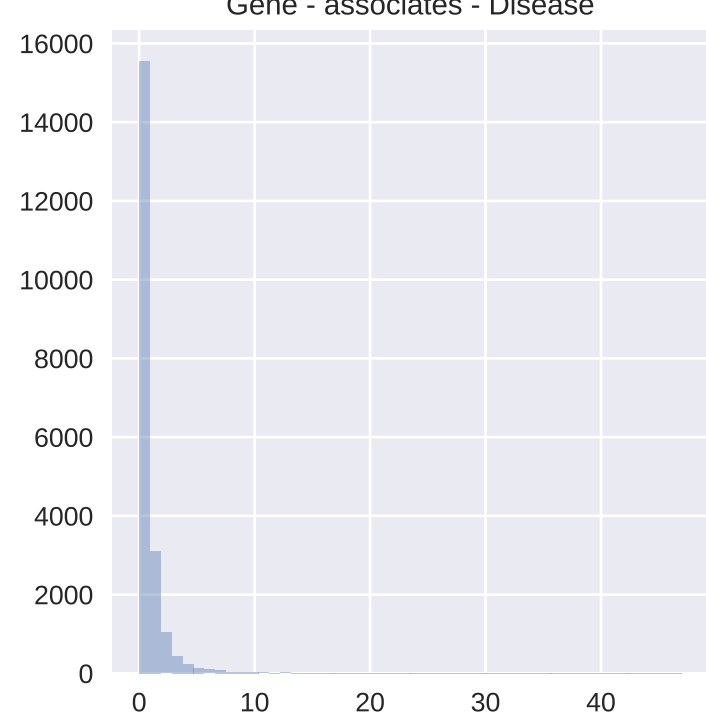

Disease - treats - Compound

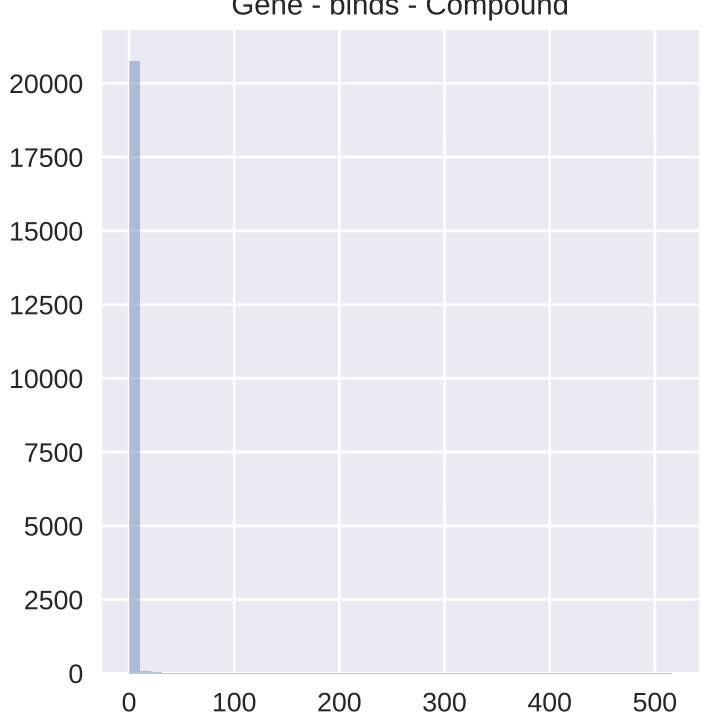

Disease - upregulates - Gene

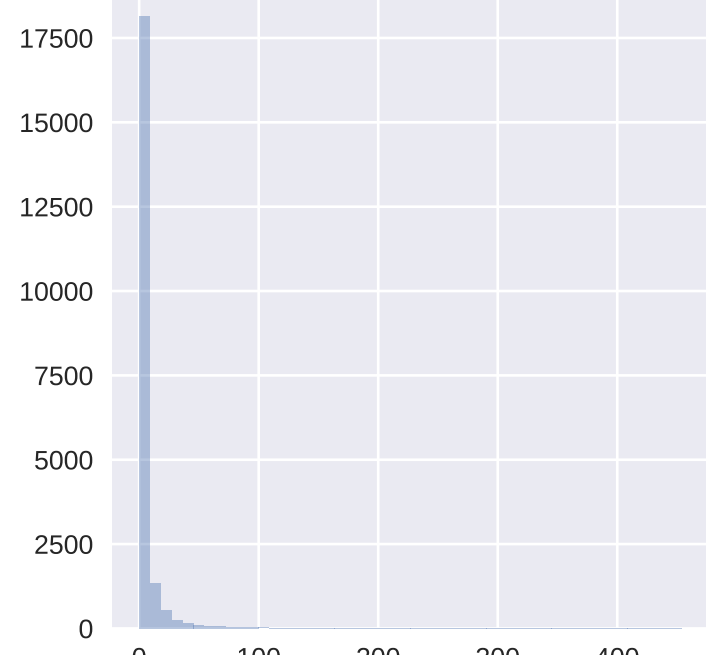

Gene - associates - Disease

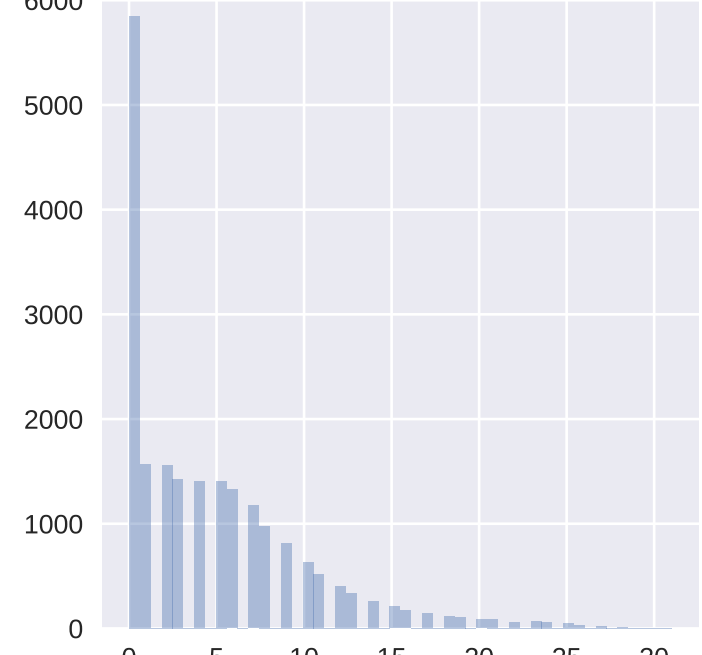

Gene - binds - Compound

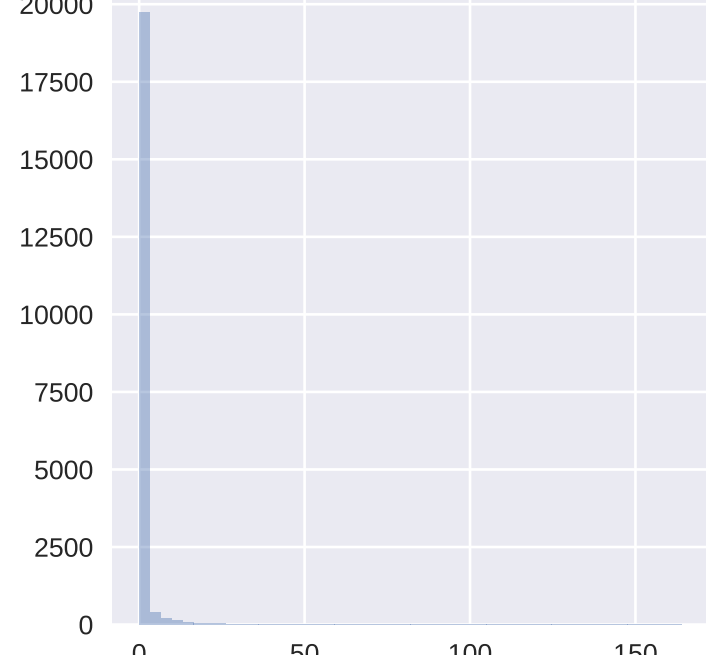

Gene - covaries - Gene

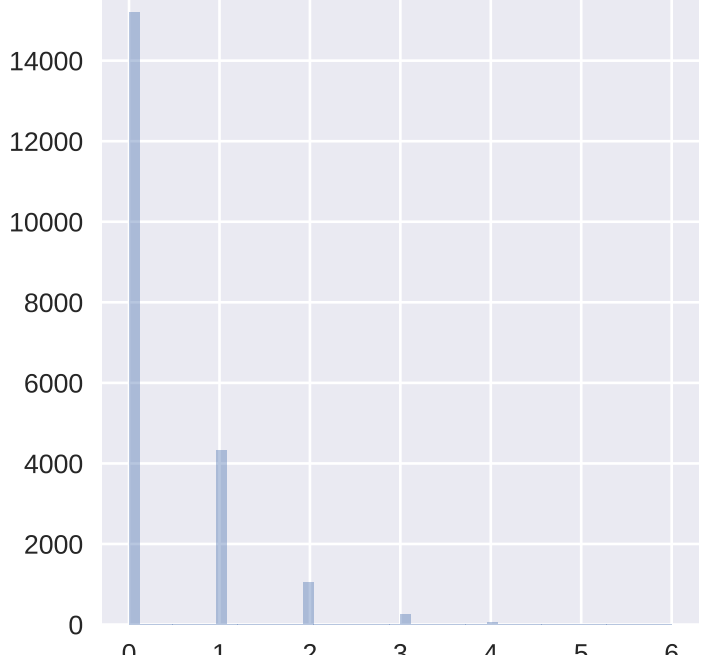

Gene - downregulates - Anatomy

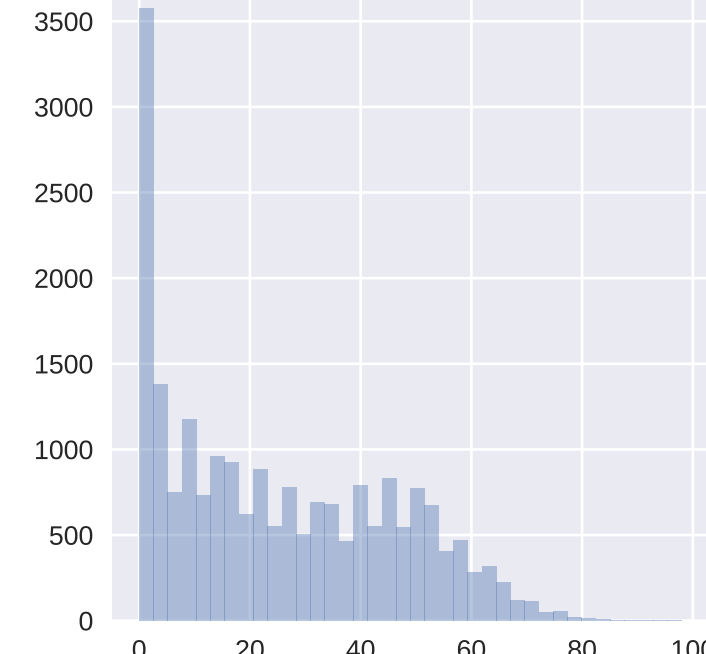

Gene - downregulates - Compound

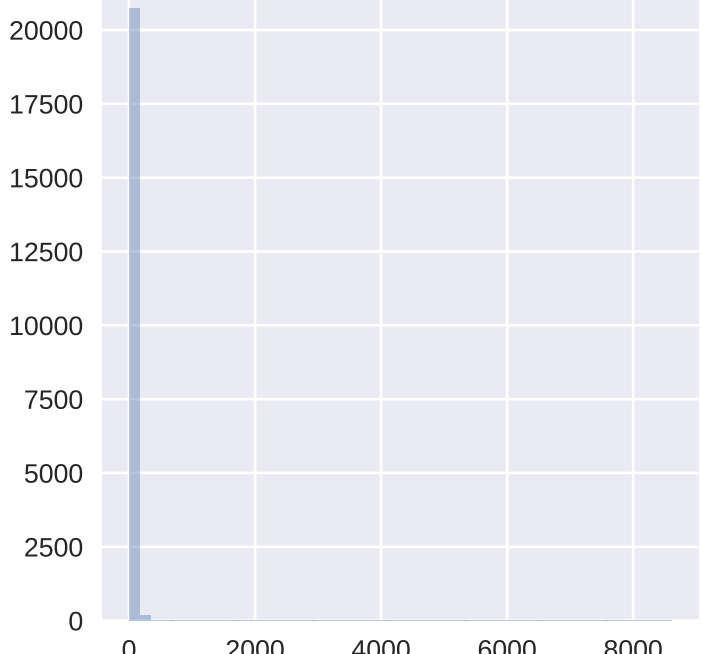

Gene - downregulates - Disease

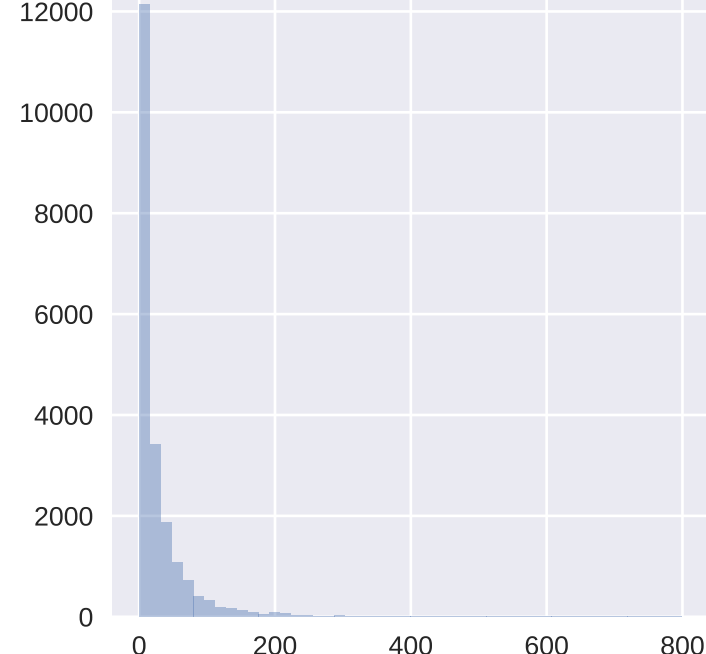

Gene - expresses - Anatomy

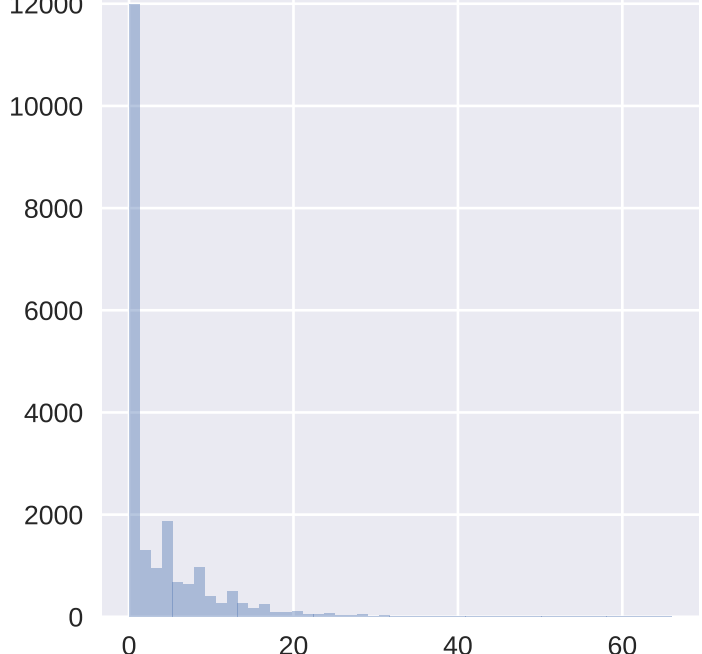

Gene - interacts - Gene

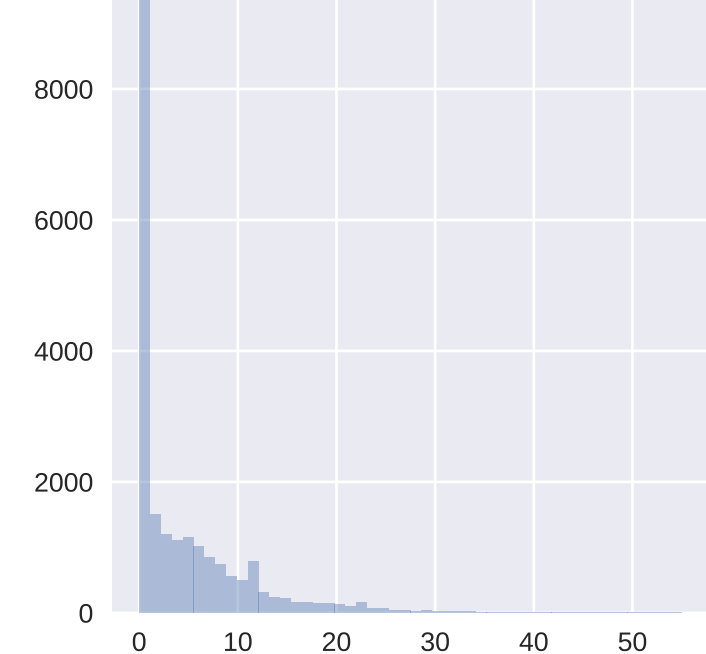

Gene - participates - Biological Process

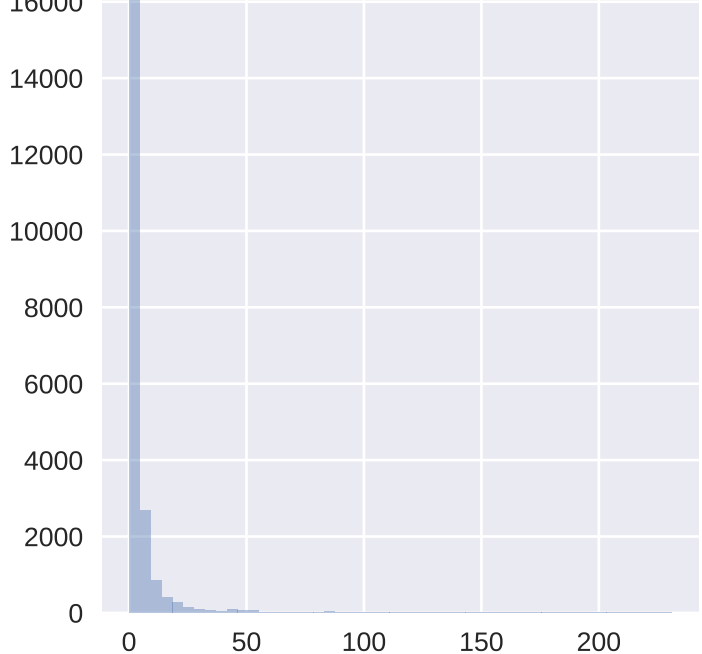

Gene - participates - Cellular Component

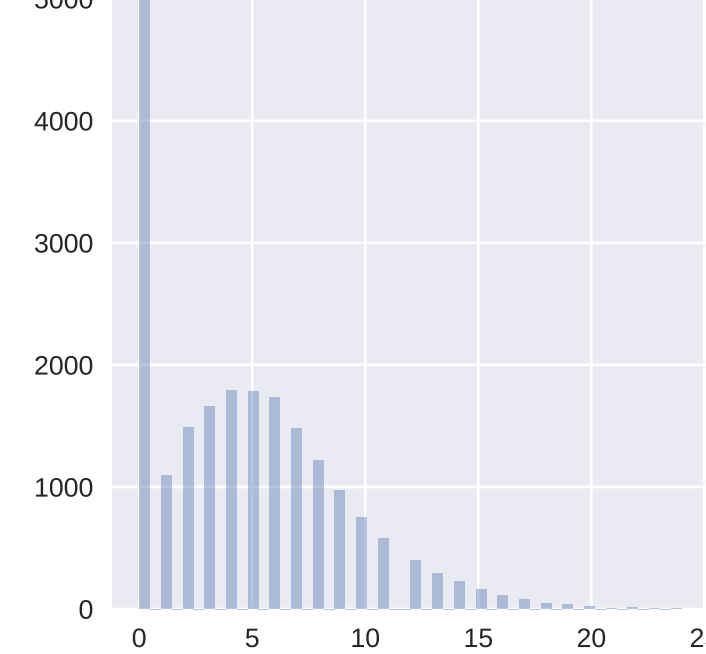

Gene - participates - Molecular Function

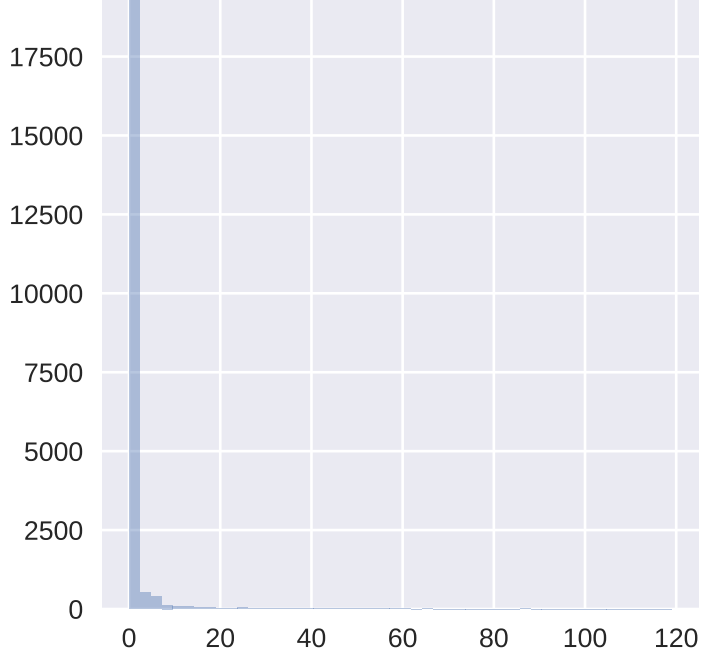

Gene - participates - Pathway

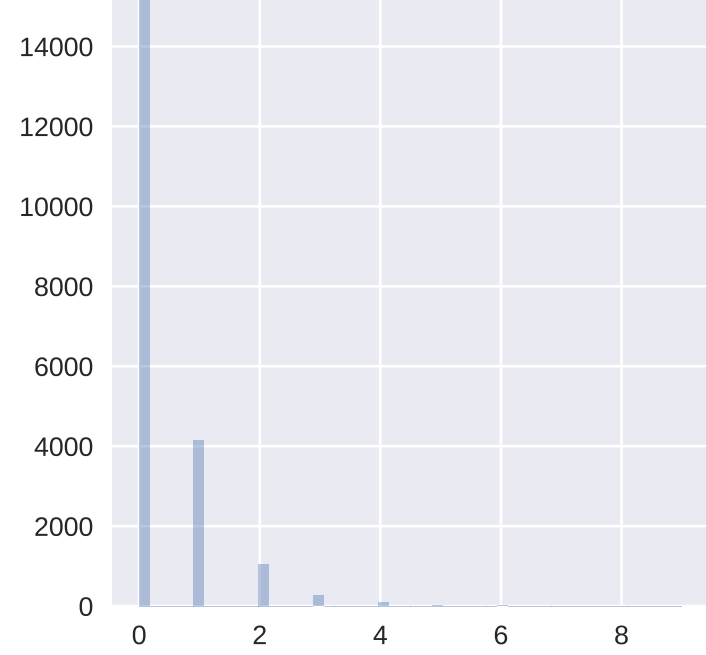

Gene - upregulates - Anatomy

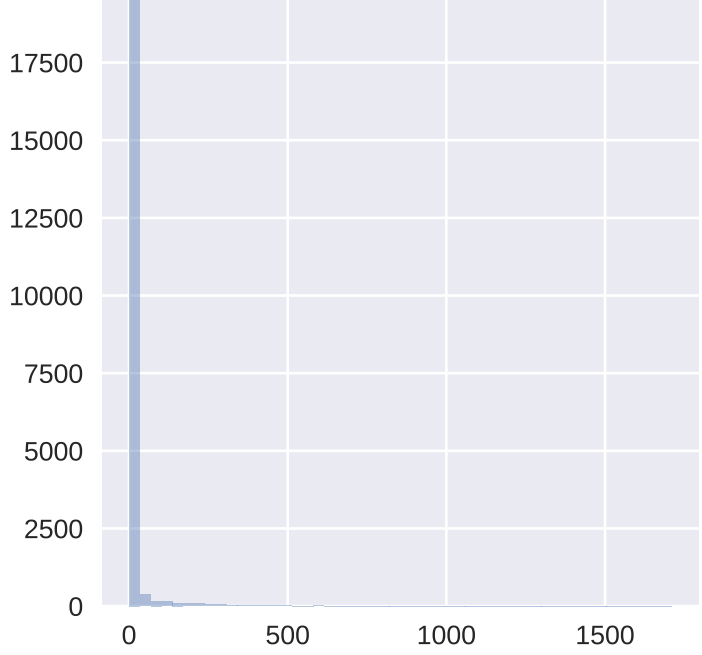

Gene - upregulates - Compound

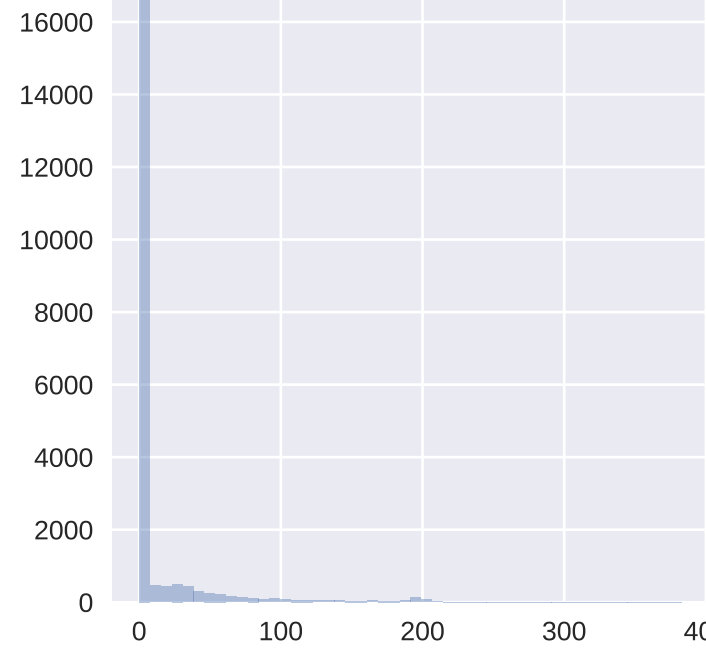

Gene - upregulates - Disease

Gene < regulates < Gene

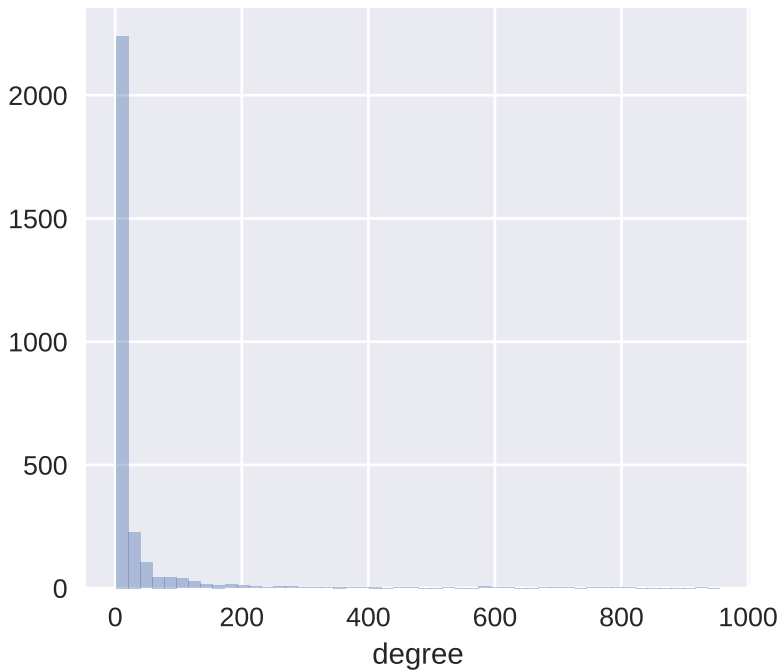

Gene > regulates > Gene

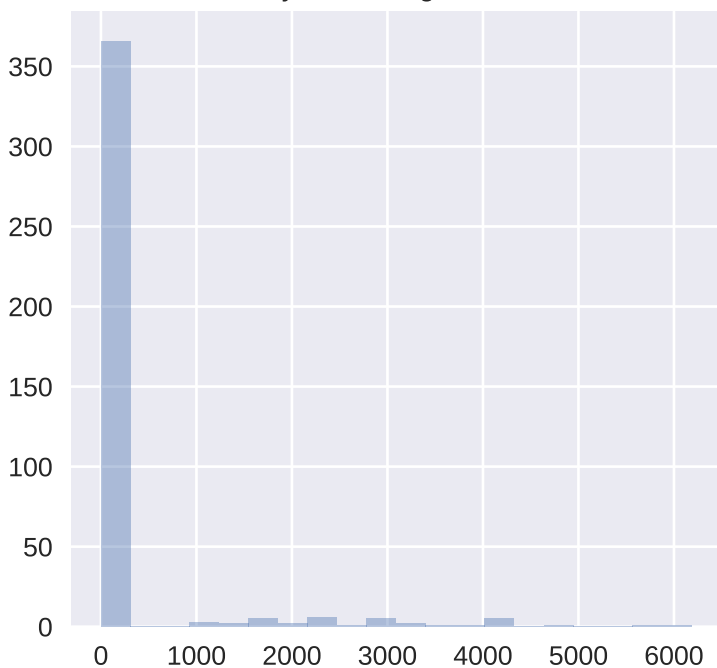

degree

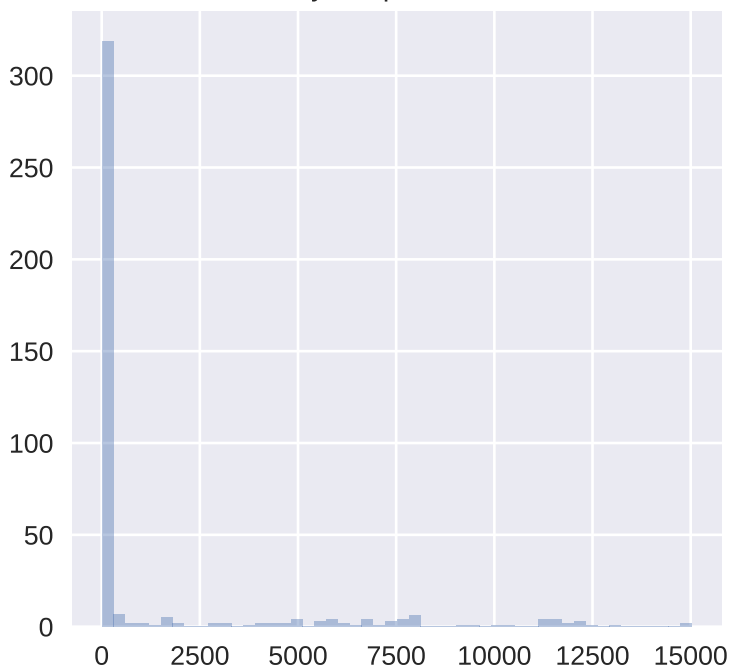

Molecular Function - participates - Gene

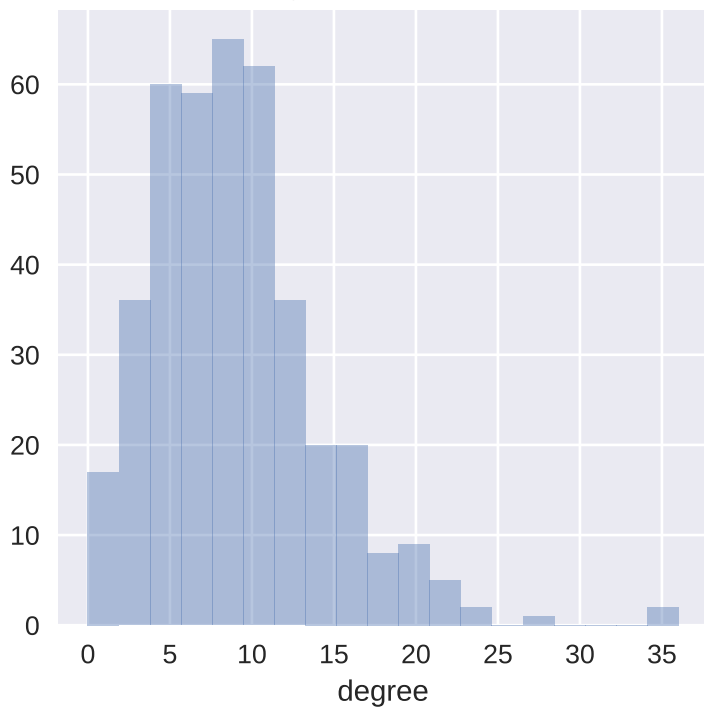

Anatomy - downregulates - Gene

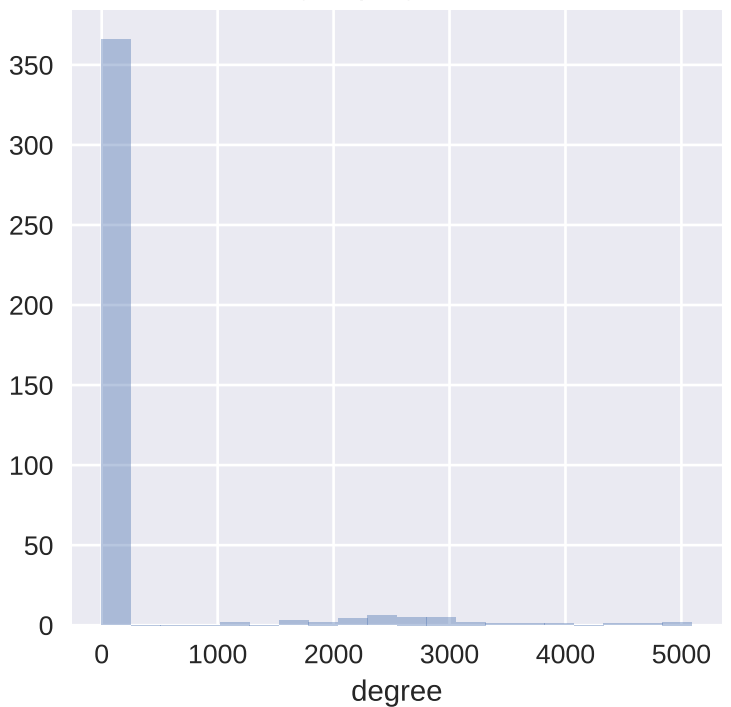

Anatomy - expresses - Gene

Anatomy - localizes - Disease

Anatomy - upregulates - Gene

Pathway - participates - Gene
